

# The Proportion of Personnel Engagement

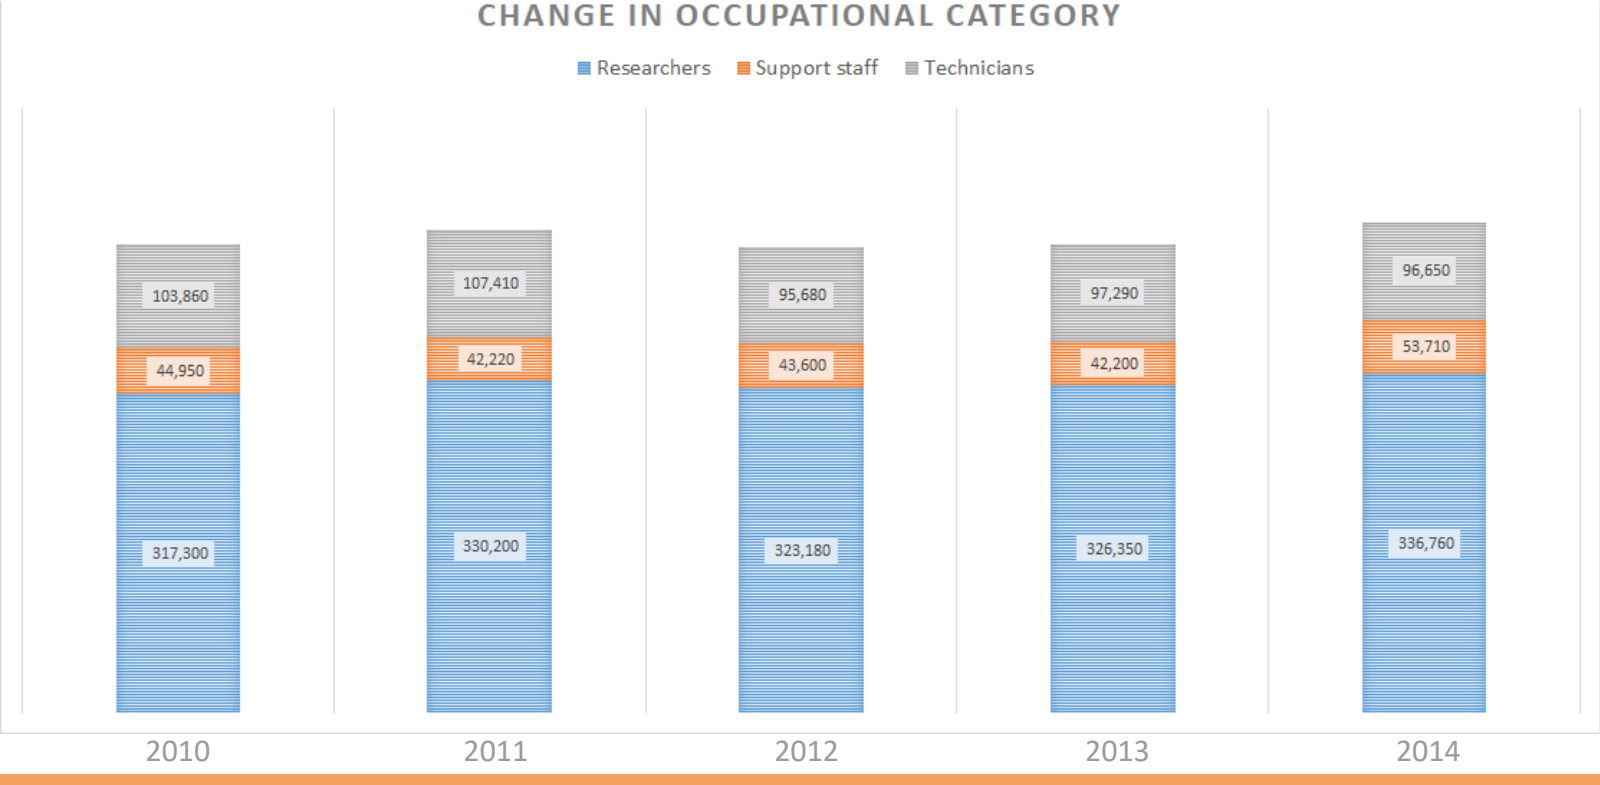

**1** From 2010 to 2014, the Performing sector and Occupational category had the highest average occupancy, indicating that they were the top-performing sectors and categories for researchers during that period.

**2** In 2012, there was a significant decline in total personal engagement, but it gradually recovered and increased thereafter, following a similar upward trend line.

**3** From 2010 to 2014, while the majority of Performing Sectors experienced steady growth in Changes, both Federal and Provincial governments, in contrast, faced a decline in their respective Performing Sector indicators.

**4** From 2010 to 2014, researchers and support staff saw a rise in personal engagement levels, with the exception of Technicians, whose personal engagement experienced no significant increase during the same period.

From 2010 to 2014, Performing sector and Occupational category excelled for researchers, while personal engagement rebounded after 2012, except for Technicians, and Federal and Provincial governments faced declines in their respective Performing Sector indicators.
